User Task

In dieser Übung üben Sie die User Task Beschreibung

Aufgabe

Durch Umsetzung des neuen Features soll es VerwalterInnen möglich sein, auch Serien (Series) geeignet zu verwalten. So soll es einerseits leicht möglich sein, neue Serien (Series), Staffeln (Seasons) und Episoden (Episodes) anzulegen, andererseits sollen sich bestehende Filme zu Serien (Series) zusammenfassen lassen. Eine Serie (Series) besteht dabei aus einzelnen Staffeln (Seasons) und eine Staffel (Season) beinhaltet mindestens eine Episode (Episode).

Vervollständigen Sie die umseitige User Task Movie Management entsprechend.

User Task		Movie Management
Purpose (Goal)		Manage movies and series and corresponding performer data of a movie collection
Frequency		Often and at any time (depending on the user's needs)
Actors		Manager
Sub-tasks:		Example of solution:
1	Describe a movie Add and describe a movie with typical data like its title, release date, production country, performers etc. Or change an existing description. Or view movies.	Provide default values wherever possible , implemented in function <i>add movie</i> and <i>edit detail data</i>
1ap	(Variant) Remove existing movie Problems: Removing all movies a certain performer participates in might result in performers associated with no movies	Ensure the consistency of performers and movies, implemented in function <i>delete movie</i>
1b	(Variant) Correct a movie The data of a movie should be correct that means be the same as data which can be found in the internet or a video store	Implemented in functions <i>search movie</i> , <i>complete movie</i>
1bp	(Variant) Complete a movie Problem: The person describing the movie might not know all important data	Fetch the movie data from a movie data base like IMDB. implemented in function <i>complete movie</i>
2	Describe a performer Add and describe a performer featuring in movies with typical data like e.g. name and date of birth. Or change an existing description. Or view performers.	Implemented in functions <i>edit detail data</i> , <i>link dataset</i> and <i>show Performers</i>
2ap	(Variant) Remove existing performer Problems: Removing a performer to an existing movie removes interesting data for a movie which should be prohibited. However, if the performer is wrong, it should be allowed to delete it.	Ensure the consistency of performers and movies, implemented in function <i>delete performer</i>
